

Statement of Commitment towards Climate Changes

AES Brasil, aware to the climate change issue, defines the activity fronts towards the decrease of greenhouse effect gas emissions in its activities and for risk and opportunity management:

ENGAGEMENT

- Influence public policies by means of active activity with the government;
- Make suppliers a priority with good practices of activity management related to climate changes.

DECREASE OF GREENHOUSE EFFECT GAS EMISSIONS

- Actively seek for the decrease of Greenhouse Effect Gas emission in our activities by means of improvements and investments in internal procedures, making the use of renewable fuels a priority and decreasing representative emission sources.

INNOVATION

- Seek for new technological and process solutions, with strategic guidance towards investments and development of new businesses for adjustment and mitigation of climate change effects.

TRANSPARENCY

- Establish any active governance procedure for activity management related to climate change, annually publish AES Brasil's Greenhouse Effect Gas emission and internally or externally communicate the actions related to the subject matter.

RISK MANAGEMENT

- Identify risks, vulnerabilities and opportunities, aiming at the adjustment and mitigation of climate changes.
